

Coach Joel Token (\$CJ) — Community Self-Audit Report

1. Contract Information

- Network: BNB Smart Chain (BEP-20)
- Contract Address: 0x9ECEfef5d5B5b0aCF2467393e7b5A6c7c501c6F6
- Compiler: Solidity 0.8.17
- Contract Type: Standard ERC20 with Mint & Burn capabilities

2. Summary of Findings

A complete review of the CJ smart contract source shows no critical or high-risk vulnerabilities for standard ERC20 operation. The contract is verified on BscScan, transparent, and publicly accessible.

3. Tokenomics Review

- Total Supply: 21,000,000 CJ
- Circulating Supply: Matches on-chain distribution
- Buy/Sell Tax: 0%
- Mint Function: Owner-only (intended strictly for rewards, community utilities, and growth)
- Burn Function: Accessible to any holder

4. Owner Privileges

The owner retains minting authority and the ability to transfer ownership. These permissions are intentional for creator-driven utility expansion. No hidden or dangerous owner-only mechanics are

present.

5. Liquidity & Safety

- All liquidity was added personally by Coach Joel
 - LP Tokens are locked on PinkSale
 - Lock Record: <https://www.pinksale.finance/pinklock/bsc/record/1391692>
- Liquidity locking significantly reduces rug-pull risk.

6. Security Considerations

- No external dependencies
- No reflection/redistribution mechanics (lower risk)
- No blacklist function
- No trading restrictions
- No hidden fees

This makes CJ safer than many modern tokens that include complex tax logic.

7. Recommendations

- Optional: Future migration of ownership to multisig
- Optional: Third-party auditor (e.g., CertiK, HashEx) for CEX listings
- Continue transparent public reporting of token emissions if minting is ever used

8. Final Notes

This report is a community-level self-audit designed to provide transparency for holders, platforms, and reviewers. It is not a formal professional audit but confirms strong security fundamentals for standard ERC20 logic.
